THANK YOU!

Who We Are?

Marionete

**marionete**

*Turning data to value*

Marionete is an IT specialised data-driven consultancy with London headquarters and operational offices in Lisbon. The only Portuguese based company, solely dedicated to Big Data Analytics.

Founded in July 2016 by Architects and Leaders in the British Financial Services with more than 6 years of experience in the Big Data Analytics domain.

marionete

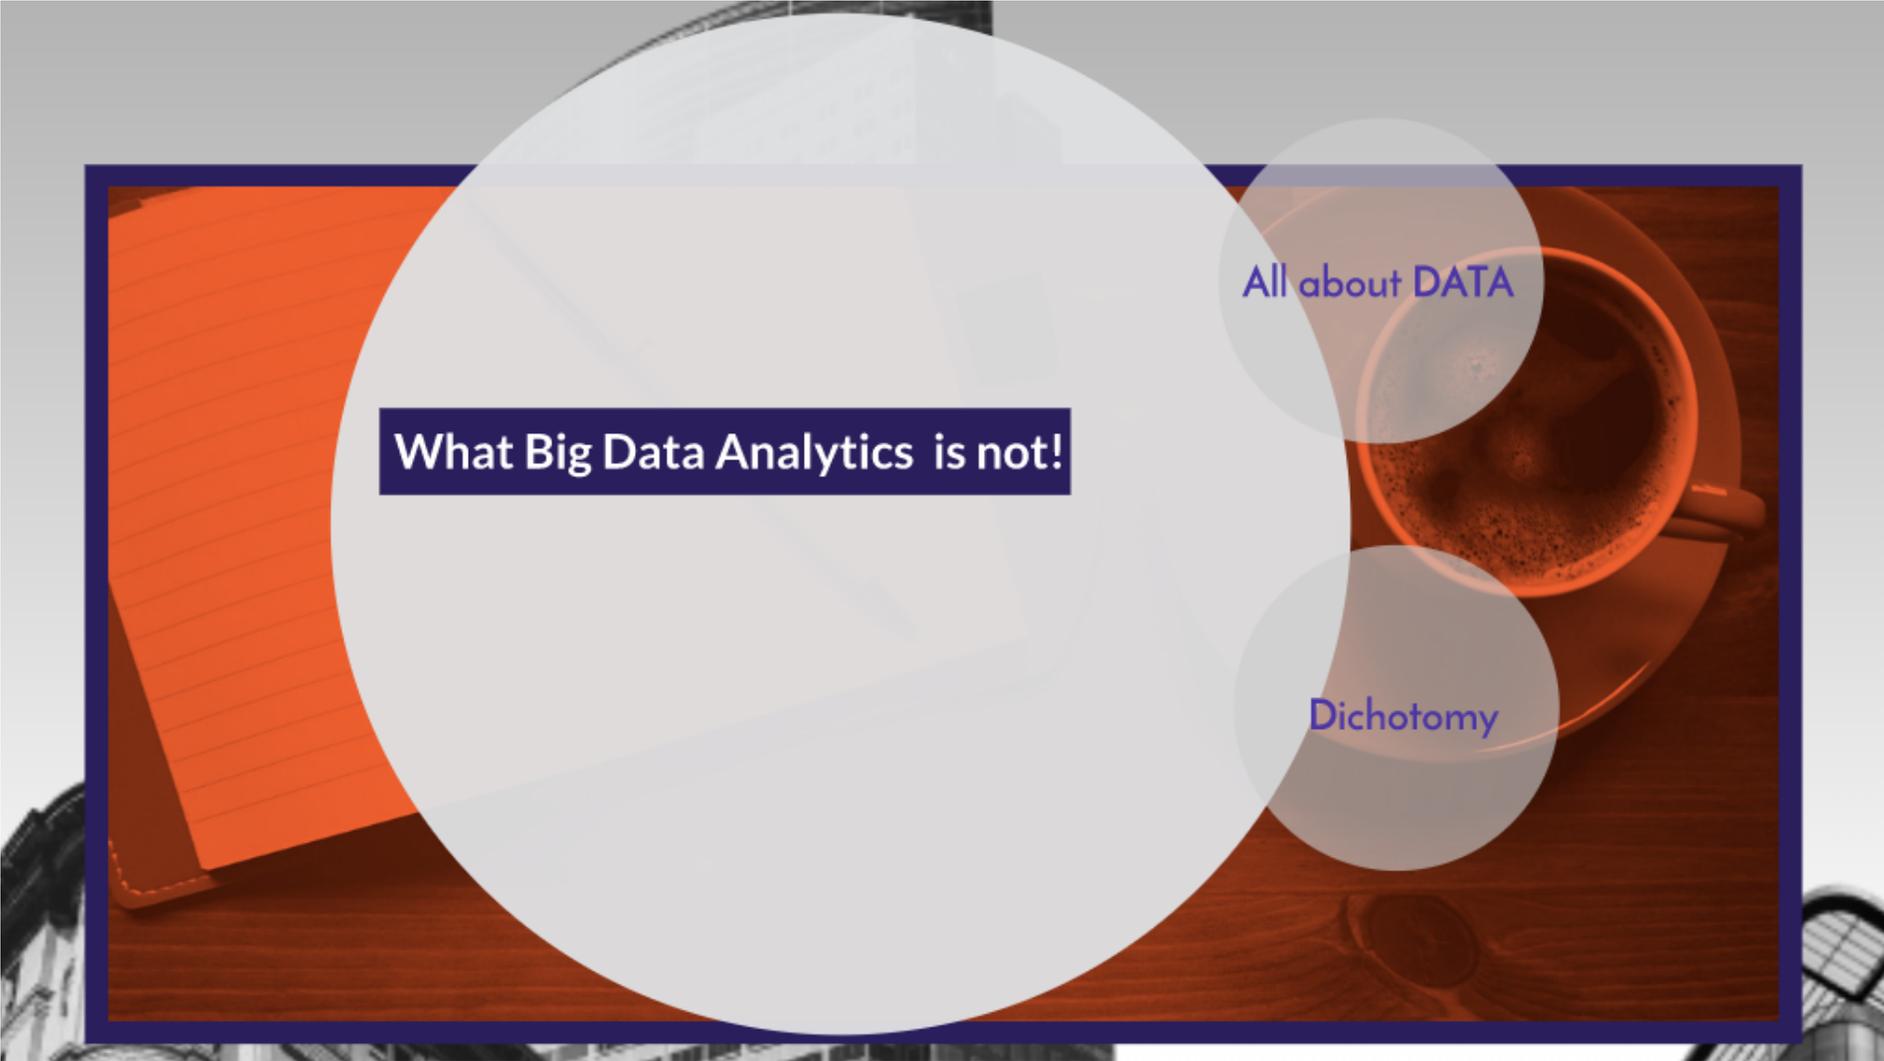

*Turning data to value*

Technologies we work with...

Hadoop, Elastic, Cassandra, Kafka, Spark, Neo4J, MongoDB, AWS, Google, Arcadia Data, Jenkins, Kinetica, StarDog, TensorFlow, Dataiku, Python, Scala, Java, JavaScript, Linux, Kubernetes, Docker, Ansible, OpenShift, Terraform, Jupyter, IOTA, Hyperledger, EOS, Streamli.io, Blockchain, Ethereum, and many other open source and data-driven technologies ...

Nope...

SQL Server, .Net, TFS, Salesforce, Oracle DB, Exadata, Teradata, Tableau, Qlik, SAP, SAS, Outsystems, UX, UI and many other proprietary software and non agile methodologies!

**What Big Data Analytics is not!**

All about DATA

Dichotomy

## The cycle of "Wata"

### Data

01.

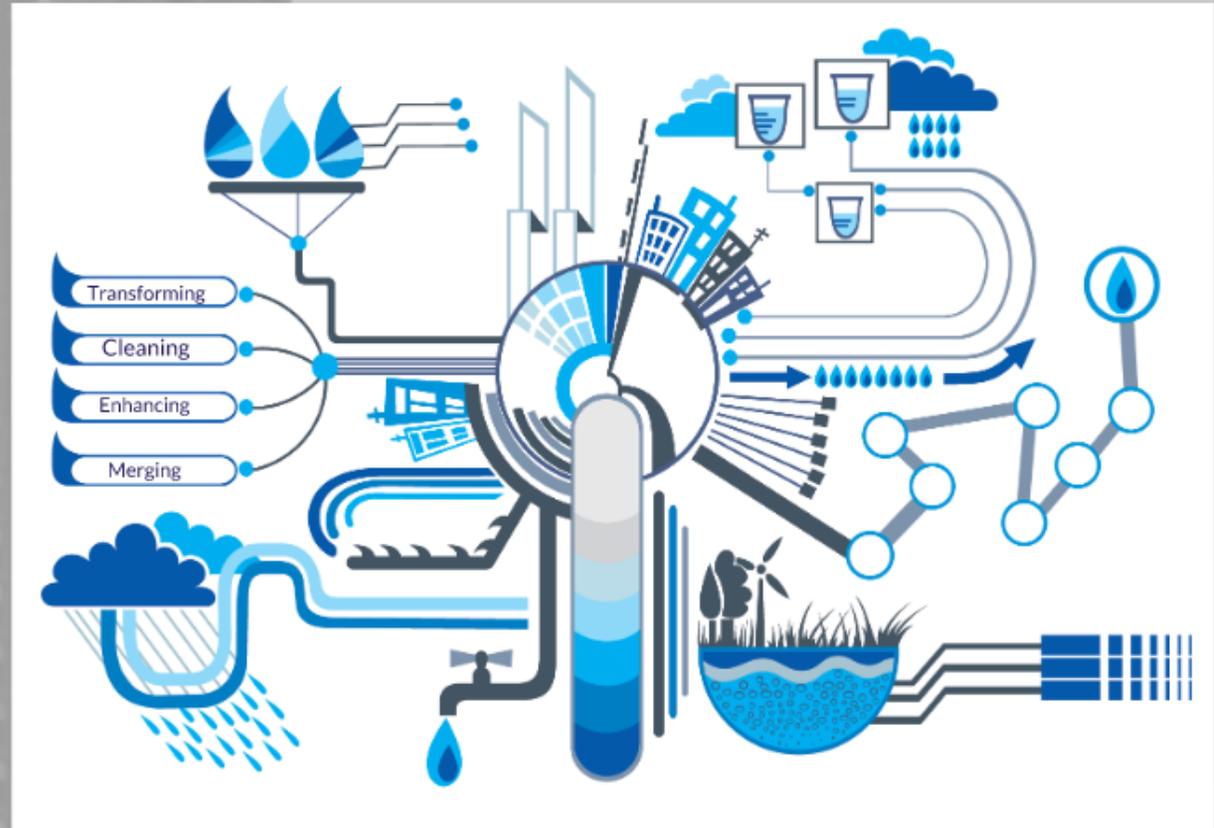

We are on the era of Data-driven economy where data is in perpetual movement and change

02.

Whatever the industry, Data and its derivatives are the most valuable commodity, businesses can produce.

03.

In the past companies were digging for commodities and prospecting for oil, today they should focus on digital extract, insights and monetisation.

## Dichotomy

- Data Lake
  - Interface based Data Model, Materialised Views, Data Virtualisation
  - Functional Reactive Programming, Events
  - Lean, Agile, Automated testing
  - DevOps, Continuous Integration, Continuous Delivery, Continuous Deployment, Automation
  - ETL is dead, long live streams, Real-time data, Streaming
  - Unstructured and Structured
  - Open Source
  - Shared resources, independent development units
  - Microservices, APIs
  - Decentralised, Distributed
  - In-memory processing, persistence and transit
  - Variety, Velocity, Volume, Data Locality, Processes on Data
  - Cloudera, HortonWorks, Databricks, DataStax, Confluent
- VS
- Data Warehouse, ROLAP, OLTP
  - Canonical Data Model
  - OOP, Procedural, DAG (Directed Acyclic Graph)
  - Waterfall, functional testing
  - ETL
  - RDBMS, MPP
  - Proprietary Software
  - Product based Infrastructure
  - SOA and multi-tier architectures
  - Centralised DBs and App Servers
  - Process on middleware
  - On-Disc
  - SAP, SAS, Oracle, Microsoft, IBM, Teradata, Tableau, Qlik

## Use Cases

- 01.** ODB car data for driver behavioural, road surface, weather, air quality, smart city, fleet management, road traffic analytics
- 02.** Market and Price data for P&L Attribution and Risk Analytics, regulatory banking reporting
- 03.** Cyber-Security, Forensic Analytics for anomaly and novelty detection to predict machinery breakdown and equipment failure, fatigue and wear
- 04.** Streaming sports with real-time advert royalties analytics

## Challenges

- 01.** The fusion of: IoT with Decentralised (Blockchain) and Distributed architectures
- 02.** Crise Managment real-time Analytics for the detection of fake news by clustering sources, ranking and generate summary recomendations.
- 03.** Determine teacher and student performance based on Machine Learning with Graph Topology.
- 04.** State-based streaming computations: very low latency computations, requiring previous state information, with incremental modifications (avoid recomputations)

Q and A
